* Compared to state in which county is located

*** Weekly Change -- Red indicates more new cases than previous weekly period, green indicates same or less (change includes those reclassified to a new location)

*** CAUTION -- Reporting reliability varies widely from country to country -- comparison based on total world population with uncertain validity of case reporting.

**** Weekly changes may not match from previous week report due to changes/corrections made by reporting agencies.

*****SC figures include probable cases as defined by DHEC. NC figures available Monday-Saturday.

** Due to delayed reporting, this figure may underestimate total diagnostic tests and week-on-week changes in diagnostic tests.

† 94% of facilities reported during the most current week.

DATA SOURCES

Notes: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Cases and Deaths: State values are aggregated data provided by the states to the CDC. Historical reports of cases and deaths exceeding 1% of the total new cases or deaths reported in the US that day have been excluded. Data is through 4/29/2021; previous week is from 4/16 to 4/22.

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. Test positivity through 4/27/2021; previous week is from 4/14 to 4/20. Test Volume through 4/23/2021; previous week is from 4/10 to 4/16.

SNFs: Skilled nursing facilities, National Healthcare Safety Network. Data is through 4/23/2021; previous week is from 4/12 to 4/18.

Admissions: Unified Hospitals Dataset in HHS Protect. Data is through 4/28; previous week is from 4/15 to 4/21.

Shortages: Unified Hospitals Dataset in HHS Protect. Values presented show the latest reports from hospitals in the week ending 4/28/2021 for staffing and the week ending 4/28/2021 for supplies.

Vaccinations: Data includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines and reflects current data available as of 12:15 EDT on 04/30/2021. Data last updated 06:00 EDT on 04/30/2021. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. Allocations are made pro rata (equal based on population) from which jurisdictions are then to order. Currently, few persons under age 18 are being vaccinated; this group represents ~22% of the US population and the percentage varies by jurisdiction.

METHODS: Details available on last two pages of report.

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes. All three trends share the same horizontal axis shown on the bottom figure.

Cases and Deaths: State values are aggregated data provided by the states to the CDC. Historical cases and deaths exceeding 1% of the total new cases or deaths reported in the US that day have been excluded. Data is through 4/29/2021.

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. Test positivity through 4/27/2021. Test volume through 4/23/2021.

METHODS: Details available on last two pages of report.

COVID-19

SOUTH CAROLINA

STATE PROFILE REPORT | 04.30.2021

67 hospitals are expected to report in South Carolina

HOSPITAL ADMISSIONS

HOSPITAL PPE SUPPLIES

DATA SOURCES

Hospitalizations: Unified Hospitals Dataset in HHS Protect. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. Hospitals explicitly identified by states/regions as those from which we should not expect reports were excluded from the percent reporting figure. Data is through 4/28/2021.

PPE: Unified Hospitals Dataset in HHS Protect. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. Values presented show the latest reports from hospitals in the week ending 4/28/2021.

METHODS: Details available on last two pages of report.

COVID-19

SOUTH CAROLINA

STATE PROFILE REPORT | 04.30.2021

COMMUNITY TRANSMISSION BY COUNTY AND METRO AREA

COUNTIES AND METRO AREAS BY COMBINED TRANSMISSION LEVEL

CATEGORY	LOW TRANSMISSION BLUE	MODERATE TRANSMISSION YELLOW	SUBSTANTIAL TRANSMISSION ORANGE	HIGH TRANSMISSION RED
# OF COUNTIES (CHANGE)	0 (0)	3 (+1)	24 (+9)	19 (+8)
# OF METRO AREAS (CHANGE)	0 (0)	1 (+1)	9 (+4)	8 (+5)

All Yellow Counties: Beaufort, Calhoun, McCormick

All Yellow CBSAs: Hilton Head Island-Bluffton

All Orange Counties: Charleston, Horry, Lexington, Berkeley, Anderson, Aiken, Florence, Orangeburg, Sumter, Cherokee, Georgetown, Union, Marion, Dillon, Williamsburg, Clarendon, Jasper, Fairfield, Barnwell, Abbeville, Hampton, Lee, Bamberg, Allendale

All Orange CBSAs: Columbia, Myrtle Beach-Conway-North Myrtle Beach, Florence, Augusta-Richmond County, Sumter, Orangeburg, Gaffney, Georgetown, Union

All Red Counties: Greenville, York, Richland, Spartanburg, Dorchester, Laurens, Oconee, Pickens, Lancaster, Kershaw, Darlington, Greenwood, Newberry, Chesterfield, Chester, Colleton, Marlboro, Edgefield, Saluda

All Red CBSAs: Greenville-Anderson, Charleston-North Charleston, Charlotte-Concord-Gastonia, Spartanburg, Seneca, Greenwood, Newberry, Bennettsville

DATA SOURCES

Maps and figures reflect 7-day average of data from 4/23-4/29 (cases), 4/21-4/27 (tests). Metro areas and counties are listed in order of the total number of cases in the last week from largest to smallest.

Note: Most recent days may have incomplete reporting.

Cases: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. Data is through 4/29/2021.

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. Data is through 4/27/2021.

Combined Transmission Level: If the two indicators suggest different transmission levels, the higher level is selected. Previous week transmission levels are computed based on current data. See [CDC COVID Data Tools](#).

METHODS: Details available on last two pages of report.

COVID-19

SOUTH CAROLINA

STATE PROFILE REPORT | 04.30.2021

HOSPITAL ADMISSIONS AND DEATH RATES

CONFIRMED NEW COVID-19 ADMISSIONS PER 100 INPATIENT BEDS

NEW DEATHS PER 100,000

National Picture: Vaccinations

PERCENT OF POPULATION FULLY VACCINATED

PERCENT OF 65+ POPULATION FULLY VACCINATED

NATIONAL COVID-19 VACCINE SUMMARY 4/30

DOSES DELIVERED	308,774,155 93,005 per 100k
DOSES ADMINISTERED	240,159,677 72,338 per 100k
PEOPLE RECEIVED AT LEAST ONE DOSE	144,894,586 43.6% of total pop.
PEOPLE 65+ RECEIVED AT LEAST ONE DOSE	45,036,784 82.1% of 65+ pop.
PEOPLE FULLY VACCINATED	101,407,318 30.5% of total pop.
PEOPLE 65+ FULLY VACCINATED	37,657,954 68.7% of 65+ pop.

DAILY NATIONAL COUNT OF VACCINE DOSES ADMINISTERED BY DATE OF ADMINISTRATION

DATA SOURCES

Vaccinations: Data includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines and reflects current data available as of 12:15 EDT on 04/30/2021. Data last updated 06:00 EDT on 04/30/2021. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. Allocations are made pro rata (equal based on population) from which jurisdictions are then in order. Currently, few persons under age 18 are being vaccinated; this group represents ~22% of the US population and the percentage varies by jurisdiction. The following states have <80% completeness reporting vaccinations by county, which may result in underestimates of vaccination data for counties: SD (80%), NM (75%), VT (74%), CO (66%), WV (54%), VA (50%), GA (49%), TX (0%), and HI (0%). Due to delays in reporting, data on doses administered in recent days (as reflected by lighter blue coloring in the Daily National Count figure) may be an underestimate of the actual value.

METHODS: Details available on last pages of report.

NEW DEATHS PER 100,000 IN THE WEEK:

ONE MONTH BEFORE

TWO MONTHS BEFORE

THREE MONTHS BEFORE

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Deaths: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. State values are aggregated data provided by the states to the CDC. Puerto Rico is shown at the territory level as deaths are not reported at the municipio level. As of 3/2/2021, Ohio changed their method of reporting COVID-19 deaths and will report deaths on the day of death, not the day of report, which could result in a fluctuation in the number of deaths from recent weeks due to delayed reporting. The week one month before is from 3/26 to 4/1; the week two months before is from 2/26 to 3/4; the week three months before is from 1/29 to 2/4. West Virginia corrected previously reported deaths on 4/27, resulting in a decrease in the total deaths over the pandemic. As such, weekly counts are not reflective of true values.

METHODS: Details available on last two pages of report.

COVID-19

Cumulative deaths

Trend Compare Map

16,726 total COVID-19 deaths

based on Current projection scenario by September 1, 2021

Scenario: Projection X Worse Y Better Z

Daily deaths

Trend Compare Map

Daily deaths is the best indicator of the progression of the pandemic, although there is generally a 17-21 day lag between infection and deaths.

Scenario: Projection X Worse Y Better Z

Hospital resource use

Trend Compare Map

Hospital resource use indicates how equipped a location is to treat COVID-19 patients for the Current projection scenario. Select All beds or ICU beds for descriptions of each measure.

All resources All beds ICU beds

Daily infections and testing [↗](#)

[Trend](#) [Compare](#) [Map](#)

Estimated infections are the number of people we estimate are infected with COVID-19 each day, including those not tested.

Estimated Infections Confirmed Infections Tests

Scenario [Projection 1](#) [Worse 1](#) [Better 1](#)

Mask use [↗](#)

[Trend](#) [Compare](#) [Map](#)

Mask use represents the percentage of the population who say they always wear a mask in public. Mask use can reduce transmission by 30% or more. [↗](#)

Scenario [Projection 1](#) [Worse 1](#) [Better 1](#)

Data sources: Prentice, Facebook Global symptom survey; Facebook US symptom survey (This research is based on survey results from University of Maryland Social Data Science Center); Kaiser Family Foundation; YouGov COVID-19 Behaviour Tracker survey

Social distancing [↗](#)

[Trend](#) [Compare](#) [Map](#)

Reducing human contact (as measured by cell phone mobility data) can drive down infections so that mask use, testing, isolation, and contact tracing can work to contain the virus.

Scenario [Projection 1](#) [Worse 1](#) [Better 1](#)

SC Reproduction Number Estimate

Table 1: Latest estimates (as of the 2021-05-05) of the number of confirmed cases by date of infection, the expected change in daily confirmed cases, the effective reproduction number, the growth rate, and the doubling time (when negative this corresponds to the halving time). The median and 90% credible interval is shown for each numeric estimate.

	Estimate
New confirmed cases by infection date	568 (360 – 907)
Expected change in daily cases	Likely decreasing
Effective reproduction no.	0.93 (0.77 – 1.1)
Rate of growth	-0.018 (-0.066 – 0.035)
Doubling/halving time (days)	-38 (20 – -11)

Confirmed cases, their estimated date of report, date of infection, and time-varying reproduction number estimates

* Percentage change as compared to same date in 2019.
