* Compared to state in which county is located

*** 24 Hr. Change -- Red indicates more new cases than previous 24 hour period, green indicates same or less (change includes those reclassified to a new location)

*** CAUTION -- Reporting reliability varies widely from country to country -- comparison based on total world population with uncertain validity of case reporting.

**** 24 Hr. changes may not match from previous day report due to changes/corrections made by reporting agencies.

*****SC figures include probable cases as defined by DHEC. NC figures available Monday-Saturday.

New case comparisons unavailable due to Memorial Day holiday.

The purpose of this report is to develop a shared understanding of the current status of the pandemic at the national, regional, state, and local levels. We recognize that data at the state level may differ from that available at the federal level. Our objective is to use consistent data sources and methods that allow for comparisons to be made across localities. We appreciate your continued support in identifying data discrepancies and improving data completeness and sharing across systems. We look forward to your feedback. All inquiries and requests for information should be directed to COVID-Data-RFI@hhs.gov.

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Cases and Deaths: State values are aggregated data provided by the states to the CDC. Historical reports of cases and deaths exceeding 1% of the total new cases or deaths reported in the US that day have been excluded. Data is through 5/20/2021; previous week is from 5/7 to 5/13.

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. Test positivity through 5/18/2021; previous week is from 5/5 to 5/11. Test volume through 5/14/2021; previous week is from 5/1 to 5/7.

SNFs: Skilled nursing facilities. National Healthcare Safety Network. Data is through 5/16/2021; previous week is from 5/3 to 5/9.

Admissions: Unified Hospitals Dataset in HHS Protect. Data is through 5/19; previous week is from 5/6 to 5/12.

Shortages: Unified Hospitals Dataset in HHS Protect. Values presented show the latest reports from hospitals in the week ending 5/19/2021 for staffing and the week ending 5/19/2021 for supplies.

Vaccinations: [CDC COVID Data Tracker](#). Data includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines and reflects current data available as of 14:20 EDT on 05/21/2021. Data last updated 06:00 EDT on 05/21/2021. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer-BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. Allocations are made pro rata (equal based on population) from which jurisdictions are then to order. Currently, few persons under age 18 are being vaccinated; this group represents ~22% of the US population and the percentage varies by jurisdiction.

ONE MONTH BEFORE

TWO MONTHS BEFORE

THREE MONTHS BEFORE

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Deaths: County-level data is from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. State values are aggregated data provided by the states to the CDC. Puerto Rico is shown at the territory level as deaths are not reported at the municipio level. As of 3/2/2021, Ohio changed their method of reporting COVID-19 deaths and will report deaths on the day of death, not the day of report, which could result in a fluctuation in the number of deaths from recent weeks due to delayed reporting. The week one month before is from 4/16 to 4/22; the week two months before is from 3/19 to 3/25; the week three months before is from 2/19 to 2/25. Nebraska corrected previously reported deaths on 5/15 and 5/19, resulting in a decrease in the total deaths over the pandemic. As such, weekly counts and week-on-week changes are not reflective of true values. Due to database maintenance, Rhode Island did not allocate deaths this week to counties; therefore counties show no deaths in the last week whereas they are present in state level data.

METHODS: Details available on last two pages of report.

IHME Model

To fully account for the impact of COVID-19, our estimates now include the total number of COVID-19 deaths, which is greater than what has been reported. To learn more about our methods for estimating total COVID-19 deaths, please see our [special analysis](#).

15,952 COVID-19 deaths

based on Current projection scenario by September 1, 2021

Daily deaths

Trend Compare Map

Daily deaths is the best indicator of the progression of the pandemic, although there is generally a 17-21 day lag between infection and deaths.

Hospital resource use

Trend Compare Map

Hospital resource use indicates how equipped a location is to treat COVID-19 patients for the Current projection scenario. Select All beds or ICU beds for descriptions of each measure.

Estimated infections are the number of people we estimate are infected with COVID-19 each day, including those not tested.

Mask use [↗](#)

[Trend](#) [Compare](#) [Map](#)

Mask use represents the percentage of the population who say they always wear a mask in public. Mask use can reduce transmission by 30% or more. [↗](#)

Scenario ☐ Projection ☒ Masks ☒

Data sources: Premise: Global COVID-19 Symptom Survey (this research is based on survey results from University of Maryland Social Data Science Center with Facebook's support); US COVID-19 Symptom Survey (this research is based on survey results from Carnegie Mellon University's Dept Research Group with Facebook's support); Walter Family Foundation; YouGov COVID-19 Behaviour Tracker survey

Social distancing [↗](#)

[Trend](#) [Compare](#) [Map](#)

Reducing human contact (as measured by cell phone mobility data) can drive down infections so that mask use, testing, isolation, and contact tracing can work to contain the virus.

SC Reproduction Number Estimate

Summary (estimates as of the 2021-05-29)

Table 1: Latest estimates (as of the 2021-05-29) of the number of confirmed cases by date of infection, the expected change in daily confirmed cases, the effective reproduction number, the growth rate, and the doubling time (when negative this corresponds to the halving time). The median and 90% credible interval is shown for each numeric estimate.

	Estimate
New confirmed cases by infection date	188 (113 – 295)
Expected change in daily cases	Decreasing
Effective reproduction no.	0.84 (0.69 – 0.99)
Rate of growth	-0.045 (-0.091 – -0.0033)
Doubling/halving time (days)	-15 (-210 – -7.6)

Confirmed cases, their estimated date of report, date of infection, and time-varying reproduction number estimates

* Percentage change as compared to same date in 2019.
