State Profile Report
08.11.2022

South Carolina

State Synopsis

	Last Week	Change from Previous Week
New COVID-19 Cases per 100,000	218	-30%
Nucleic Acid Amplification Test (NAAT) positivity rate	23.4%	-1.3%
New Confirmed COVID-19 Hospital Admissions per 100,000	14.6	+2%
New COVID-19 Deaths per 100,000	0.1	-60%

COVID-19 Vaccinations

Total fully vaccinated	2,993,190 people	58.1% of total pop.
<5 years with at least one dose	6,069 people	2.1% of <5 pop.
5-11 years fully vaccinated	83,570 people	19.2% of 5+ pop.
12+ years fully vaccinated	2,907,083 people	65.8% of 12+ pop.
65+ years received booster	549,487 people	65.8% of fully vaccinated 65+ pop.

SARS-CoV-2 Variants of Concern

- In the 4 weeks ending 7/16/2022, the following proportions of variants of concern were identified in [South Carolina](#): Omicron: BA.2, 2.9%; BA.2.12.1, 19.5%; BA.4, 14.5%; BA.4.6, 4.2%; BA.5, 58.9%

COVID-19 Reported Cases per 100,000 Population (last 7 days) and Percent of Total Population Fully Vaccinated

The purpose of this report is to develop a shared understanding of the current status of the pandemic at the national, regional, state, and local levels. We recognize that data at the state level may differ from that available at the federal level. Our objective is to use consistent data sources and methods that allow for comparisons to be made across localities. We appreciate your continued support in identifying data discrepancies and improving data completeness and sharing across systems. We look forward to your feedback. All inquiries and requests for information should be directed to <https://www.cdc.gov/dcs/ContactUs/Form>.

	5-11 years first dose (% of population)	879 (0.2%)	-11.8%	10,026 (0.2%)	63,435 (0.2%)
	5-11 years fully vaccinated (% of population)	505 (0.1%)	+5.0%	6,203 (0.1%)	34,800 (0.1%)
	12+ years first dose (% of population)	3,420 (0.1%)	-12.2%	40,897 (0.1%)	218,860 (0.1%)
	12+ years fully vaccinated (% of population)	4,711 (0.1%)	+37.3%	50,066 (0.1%)	332,481 (0.1%)
	12+ years booster dose	4,414	-20.8%	45,437	302,226
	65+ years booster dose	1,231	-32.5%	11,509	60,998

* Indicates absolute change in percentage points.

† Due to delayed reporting, this figure may underestimate total diagnostic tests and week-on-week changes in diagnostic tests.

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Cases and Deaths: State values are aggregated data provided by the states to the CDC. Historical reports of cases and deaths exceeding 1% of the total new cases or deaths reported in the US that day have been excluded. Data are through 8/10/2022; previous week is from 7/28 to 8/3.

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. The term Nucleic Acid Amplification Test (NAAT) includes RT-PCR and other testing methods. Test positivity through 8/8/2022; previous week is from 7/26 to 8/1. Test volume through 8/4/2022; previous week is from 7/22 to 7/28.

Admissions: Unified Hospitals Dataset in HHS Protect. Data are through 8/9, previous week is from 7/27 to 8/2.

Shortages: Unified Hospitals Dataset in HHS Protect. Values presented show the latest reports from hospitals in the week ending 8/3/2022 for supplies.

Vaccinations: [CDC COVID Data Tracker](#). Data include the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines. Data last updated 04:00 EDT on 08/10/2022. People initiating vaccination include those who have received the first dose of the Moderna or Pfizer-BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. Population denominators reflect the subset of the population of the corresponding age range.

METHODS: Details available on last two pages of report.

Percent of Population Fully Vaccinated

Percent of 18+ Population Fully Vaccinated

DATA SOURCES

County reporting completeness for South Carolina is 93.1%.

†Booster dose percentages are a proportion of the respective population that is fully vaccinated.

Vaccinations: [CDC COVID Data Tracker](#). Data includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines. Data last updated 04:00 EDT on 08/10/2022. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer-BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine.

METHODS: Details available on last two pages of report.

COVID-19

South Carolina

State Profile Report | 08.11.2022

68 hospitals are expected to report in South Carolina

Hospital Admissions

Hospital Utilization

DATA SOURCES

Hospitalizations: Unified Hospitals Dataset in HHS Protect. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. Hospitals explicitly identified by states/regions as those from which we should not expect reports were excluded from the percent reporting figure. Inpatient and ICU utilization is shown as a weekly rate; the weekly average of beds occupied is divided by the weekly average of total beds available. Data are through 8/9/2022.

METHODS: Details available on last two pages of report.

COVID-19

South Carolina

State Profile Report | 08.11.2022

COVID-19 Community Level by county

Counties by COVID-19 Community Level

Category	Low	Medium	High
# of Counties (change)	2 (0)	12 (+27)	32 (+27)

All Low Counties: Clarendon, Lee

All Medium Counties: Abbeville, Allendale, Bamberg, Calhoun, Chester, Kershaw, Lancaster, Orangeburg, Saluda, Sumter, Williamsburg, York

All High Counties: Aiken, Anderson, Barnwell, Beaufort, Berkeley, Charleston, Cherokee, Chesterfield, Colleton, Darlington, Dillon, Dorchester, Edgefield, Fairfield, Florence, Georgetown, Greenville, Greenwood, Hampton, Horry, Jasper, Laurens, Lexington, Marion, Marlboro, McCormick, Newberry, Oconee, Pickens, Richland, Spartanburg, Union

DATA SOURCES

Maps and figures reflect 7-day average of data from 8/4-8/10 (cases), 8/3-8/9 (hospital data). Metro areas and counties are listed in alphabetical order.

Note: Most recent days may have incomplete reporting.

Cases: County-level data are from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. Data are through 8/10/2022.

Admissions: Unified Hospitals Dataset in HHS Protect. Data are through 8/9/2022.

COVID-19 Community Levels: COVID-19 Community Level is determined by the higher of the new admissions and inpatient bed metrics, based on the current level of new cases per 100,000 population in the past 7 days. See [CDC Community Levels](#). A county is N/A if hospital data is not available. County data is mapped from Health Service Areas, defined as a single county or cluster of counties that are generally self-contained with respect to hospital care. Previous week levels are computed based on current data.

METHODS: Details available on last two pages of report.

COVID-19

South Carolina

State Profile Report | 08.11.2022

Case Rates, NAAT Positivity, Hospital Admissions, and Death Rates

New Cases per 100,000

Nucleic Acid Amplification Test (NAAT) Positivity

Confirmed new COVID-19 Admissions per 100,000

New Deaths per 100,000

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Cases and Deaths: County-level data are from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. Data are through 8/10/2022.

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. The term Nucleic Acid Amplification Test (NAAT) includes RT-PCR and other testing methods. Data are through 8/8/2022.

Hospitalizations: Unified Hospitals Dataset in HHS Protect. Totals include only confirmed COVID-19 admissions. County data is mapped from [Health Service Areas](#), defined as a single county or cluster of counties that are generally self contained with respect to hospital care. Hospitals are assigned to an HSA based on county of location. In some cases, reports are aggregates of multiple facilities that cross HSA boundaries; in these cases, values are assigned based on the county for the aggregate. Data are through 8/9/2022.

METHODS: Details available on last two pages of report.

Daily National Count of Vaccine Doses Administered by Date of Administration

DATA SOURCES

†Booster dose percentages are a proportion of the respective population that is fully vaccinated.

Vaccinations: [CDC COVID Data Tracker](#). Data includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines. Data last updated 04:00 EDT on 08/10/2022. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer-BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. The count of people who received a booster dose includes anyone who is fully vaccinated and has received another dose of COVID-19 vaccine since August 13, 2021. This includes people who received booster doses and people who received additional doses. Due to delays in reporting, data on doses administered in recent days (as reflected by lighter purple coloring in the Daily National Count figure) may be an underestimate of the actual value.

METHODS: Details available on last two pages of report.

COVID-19

National Picture: Vaccinations

National Summary of Vaccinations by Race/Ethnicity

National Summary of Vaccinations by Age

DATA SOURCES

Vaccinations: [CDC COVID Data Tracker](#). Data includes the Moderna, Pfizer BioNTech, and J&J/Janssen COVID-19 vaccines. Data last updated 04:00 EDT on 08/10/2022. Persons who are fully vaccinated include those who have received both doses of the Moderna or Pfizer-BioNTech vaccine as well as those who have received one dose of the J&J/Janssen vaccine. Race/Ethnicity data were available for 74.8% receiving at least one dose and 78.2% fully vaccinated. Age data were available for 100.0% receiving at least one dose and 100.0% fully vaccinated. Texas does not report demographic-specific dose number information to CDC, so data for Texas are not represented in demographic trends figures. "NH" stands for Non-Hispanic/Latinx, "AI/AN" stands for American Indian or Alaska Native, and "NH/PI" stands for Native Hawaiian or Pacific Islander.

METHODS: Details available on last two pages of report.

Nucleic Acid Amplification Test (NAAT) Positivity in the Week:

One Month Before

Two Months Before

Three Months Before

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data. The term Nucleic Acid Amplification Test (NAAT) includes RT-PCR and other testing methods. Data are through 8/8/2022. The week one month before is from 7/5 to 7/11; the week two months before is from 6/7 to 6/13; the week three months before is from 5/10 to 5/16. As of February 17, 2022, Iowa is no longer reporting negative test results; therefore, test volume and test positivity from this date forward is no longer presented. Due to reporting delays, New Mexico's test positivity may be incomplete for the last week.

METHODS: Details available on last two pages of report.

Three Months Before

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Admissions: Unified Hospitals Dataset in HHS Protect through 8/9/2022. Totals include only confirmed COVID-19 admissions. The week one month before is from 7/6 to 7/12; the week two months before is from 6/8 to 6/14; the week three months before is from 5/11 to 5/17. County data is mapped from [Health Service Areas](#), defined as a single county or cluster of counties that are generally self contained with respect to hospital care. Hospitals are assigned to an HSA based on county of location. In some cases, reports are aggregates of multiple facilities that cross HSA boundaries; in these cases, values are assigned based on the county for the aggregate.

METHODS: Details available on last two pages of report.

One Month Before

Two Months Before

Three Months Before

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes. Some states report deaths by date of death, periodically backfilling from their data by date of report. This can result in under-estimates or fluctuations in the number of deaths reported in the last week.

Deaths: County-level data are from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. State values are aggregated data provided by the states to the CDC. As of 3/2/2021, Ohio changed their method of reporting COVID-19 deaths and will report deaths on the day of death, not the day of report, which could result in a fluctuation in the number of deaths from recent weeks due to delayed reporting. As of 4/7/2022, North Dakota is no longer reporting county-level deaths; therefore, county-level death counts from this date forward are no longer available. Puerto Rico is shown at the territory level as deaths are not reported at the municipio level. The week one month before is from 7/7 to 7/13; the week two months before is from 6/9 to 6/15; the week three months before is from 5/12 to 5/18. Kansas recently issued corrections to their state deaths data, resulting in negative values for the last week.

METHODS: Details available on last two pages of report.

National Picture: COVID-19 Community Level

COVID-19 Community Level by County

Counties by COVID-19 Community Level Component Metrics

<200 Cases per 100K

Admissions per 100K	<10.0	10.0 to 19.9	20.0+

Counties by COVID-19 Community Level

Category	Low	Medium	High
# of Counties (Change)	636 (+11)	1,309 (+57)	1,275 (+68)
% of Counties (Change)	19.8% (+0.3%)	40.7% (+1.8%)	39.6% (+2.1%)

DATA SOURCES

Maps and figures reflect 7-day average of data from 8/4-8/10 (cases), 8/3-8/9 (hospital data).

Note: Most recent days may have incomplete reporting.

Cases: County-level data are from a CDC managed aggregate county dataset compiled from state and local health departments; therefore, the values may not match those reported directly by the state. Data are through 8/10/2022.

Admissions: Unified Hospitals Dataset in HHS Protect. Data are through 8/9/2022.

County Percentages: Based on a denominator of 3,220 county/county-equivalents, including states, the District of Columbia, and Puerto Rico municipios.

COVID-19 Community Levels: COVID-19 Community Level is determined by the higher of the new admissions and inpatient bed metrics, based on the current level of new cases per 100,000 population in the past 7 days. See [CDC Community Levels](#). A county is N/A if hospital data is not available. County data is mapped from Health Service Areas, defined as a single county or cluster of counties that are generally self-contained with respect to hospital care. Previous week levels are computed based on current data.

METHODS: Details available on last two pages of report.

IHME Model

IHME updates its COVID-19 models and forecasts during the first half of each month. In the meantime, our researchers will keep track of any developments that might require more frequent updates.

Cumulative deaths

Trend Compare Map

Reported deaths are the number of deaths officially reported as due to COVID-19. Total deaths are the estimated number of deaths attributable to COVID-19, including unreported deaths.

Reported Total Both

18,498 reported COVID-19 deaths

based on Current projection scenario by November 1, 2022

Scenario Projection Masks Antibiotics

Daily deaths

Trend Compare Map

Daily deaths is the best indicator of the progression of the pandemic, although there is generally a 17-21 day lag between infection and deaths.

Reported Total Both

Scenario Projection Masks Antibiotics

Hospital resource use

Trend Compare Map

Hospital resource use indicates how equipped a location is to treat COVID-19 patients for the Current projection scenario. Select All beds or ICU beds for descriptions of each measure.

All All beds ICU beds

Daily infections and testing [↗](#)

[Trend](#) [Compare](#) [Map](#)

Estimated infections are the number of people we estimate are infected with COVID-19 each day, including those not tested.

Mask use [↗](#)

[Trend](#) [Compare](#) [Map](#)

Mask use represents the percentage of the population who say they always wear a mask in public. Mask use can reduce transmission by 30% or more. [↗](#)

Data sources: [Pew Research Center](#) (US only); The Delphi Group at Carnegie Mellon University and University of Maryland COVID-19 Trends and Impact Surveys, in partnership with Redwood (Kaiser Family Foundation); YouGov COVID-19 Behaviour Tracker survey.

Social distancing [↗](#)

[Trend](#) [Compare](#) [Map](#)

Reducing human contact (as measured by cell phone **mobility** data) can drive down infections so that mask use, testing, isolation, and contact tracing can work to contain the virus.
